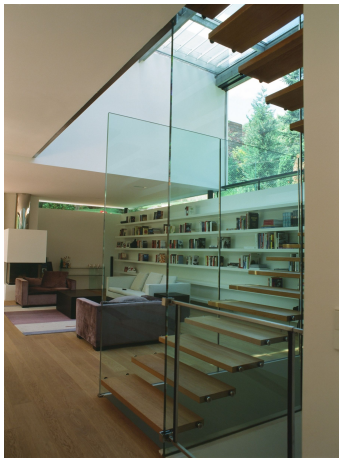
Cubic Lights

Gallery



Solution

Cubic Lights is situated in an area with a high density of private houses.

A single volume with hang up rooms creates a free-standing private house.

One who enters the ground floor of Cubic Lights will witness a completely open and therefore floating space. Hovering room boxes create different room heights – from 3 to 6m – throughout the building. The living room at ground floor is continuously glazed and opens towards the South to a wooden terrace which is flanked by a swimming pool. While inside the living room and looking up, the roof level is composed of three single cubes, freely floating above the exposed ground floor. Satellite-like, light flooded cubes which house the bed- and bathrooms of the owner.

The hanging boxes create the ceilings and take care of shading as well; furthermore the single rooms have possibilities to close them through shadings in order to create privacy when desired.

One who enters the ground floor of Cubic Lights will witness a completely open and therefore floating space which is opened to the south. Looking up, the roof level is composed of three single cubes, freely hovering above the exposed ground floor. Satellite-like, light flooded cubes which house the bed- and bathrooms of the owner.
